December 12, 1974

Mr. R. J. Collins
Department of Computer Science
UNIVERSITY OF MANITOBA
Winnepeg, Manitoba, Canada R3T 2N2

Dear Mr. Collins:

Thank you for your telephone request of December 11, 1974 regarding the UNIX Time-Sharing System.

It is our current practice, in appropriate circumstances, to honor requests by nonprofit educational institutions for royalty-free licenses for selected Bell System software. However, the sole authorized use of such software pursuant to such royalty-free license is limited to "academic and educational purposes". Accordingly, all other uses of such software, such as administrative or commercial uses (including, without limitation, all uses for research funded or otherwise supported in whole or in part by a third party in consideration for access or rights to the fruits of such research), by or on behalf of your institution are unlicensed whether or not used by your students or faculty to provide financial support for, or otherwise in furtherance of, your educational and academic functions.

If you find these terms to be satisfactory, please provide me with the specific address of the data center at which you plan to use this software, and I will have the appropriate agreement prepared for your review.

Upon execution of the agreement, we will instruct the Bell Telephone Laboratories to furnish you with the UNIX operating system. The current version of UNIX requires at least the following equipment:

PDP-11/40 (with EIS) or PDP-11/45 CPU
KT segmentation option
32K words of core
RK or RP disk
KW (line or programmable) clock
Standard DEC console (LA, VT, or LT)

A service charge of $150 will be due upon your execution of the agreement. That charge is made to cover the costs of handling your request, supplying the system on 9 track 800 bpi magtape (provided by the licensee), reproducing the printed material and postage.

I am enclosing for your review a UNIX Summary, which includes the following:

a. The minimum hardware configuration required.
b. The major components of the Basic UNIX Package.

Also enclosed are copies of a reprint of recently published articles entitled, "The UNIX Time-Sharing System", which may be of interest to you.

Very truly yours,

R. G. SHAHPAZIAN
Assistant Manager
Patent Licensing
